YouTRACK 5

The Agile Issue Tracking and Project Tracking Tool

Key Facts

JetBrains YouTrack is an intelligent, keyboard-centric Agile issue tracker and project management tool. It helps software developers perform most of their issue-handling tasks with two simple, keyboard-driven controls: a search box and a command window.

In YouTrack search box, you enter Google-like search queries aided by suggestions and highlighting. This lets you find or filter out any subset of issues in no time, concentrating on the task at hand.

Powerful YouTrack commands help you modify multiple issues simultaneously. For example, you can mark 10 issues as being in progress, raise their priority, and specify a product version that they affect — instantly.

Agile Project management in YouTrack is designed to help teams plan, visualize and manage their work in an efficient manner, with support for both Scrum and Kanban methodologies.

Key Benefits

Commands protect YouTrack from UI bloating, efficiently replacing zillions of buttons, dropdowns and checkboxes with a compact, flexible issue modification tool. Command syntax is similar to that of YouTrack search queries, so you can familiarize yourself with both very easily.

The set of issue attributes along with their values is completely customizable in YouTrack. You can define your own set of issue attributes for every project: Define your own set of issue States, add Severity, set Assignee field to be a multi-selection field, and much more.

You can also create custom workflows to define the lifecycle of your issues based on your specific process needs. With customizable workflow and customizable attributes, you have the power to create the issue tracking process.

Key Features

- **Agile project management**. Scrum and Kanban boards. Backlog management. Burndown and Cumulative charts. Multiple projects on the board. Multiple boards.
- **Powerful Customization**. Custom attributes, customizable workflows and powerful YouTrack REST API.
- **Keyboard-centric**. Simple keyboard shortcuts for creating, editing, and navigating between issues.
- **Time management**. Add work items, summarize time spent on a feature, create time reports.
- **Localization**. YouTrack localized to English, French, German, Russian and Spanish. Custom localizations are also available.
- **Mailbox integration** for submitting issues and receiving updates via e-mail. Custom notification templates.
- **Jabber bot** for applying commands and get issue details directly from your Jabber client by chatting with YouTrack.
- **Integration** with **JetBrains products:** Intellij IDEA, TeamCity, PhpStorm, PyCharm, WebStorm, RubyMine, and MPS.
- **Integration** with **LDAP**, and **OpenID** for easier access control.
- **Integration** with **VCSs** through TeamCity and native **GitHub integration**.
- **Integration** with **JIRA** and **Zendesk**.
- **Integration** with **TestLink** and **TestRail**.
- **Import** existing projects from any bug tracker.
- **Mobile UI** for accessing and handling issues from a mobile device.
